

A New Start for the EPE Journal

This Issue is the first to be published by the EPE Association without any joint venture.

We took the opportunity of this publisher's change to improve the overall contents and lay out of the journal.

As previously, you will find reviewed papers on different topics, from components to drives with special attention devoted to resonant converters and an extended tutorial on filter design for traction application.

Continued Education activities of COMETT-PED and EPE Association are growing. An impressive programme is proposed on pp. 50 to 54.

A real novelty is the publication of short application papers related to new products. In Brighton, you expressed the wish to see such information enter the EPE Journal. We hope that the following pages will fulfill your eagerness to keep in touch with the very latest technological developments.

Another novelty: the reader service card. By simply returning the card to the EPE Secretariat, you will be able to gather more information about products, register for the courses, get all kinds of information about our activities. All this using one single card!

The EPE Association is promoting actively information exchange throughout Europe in the field of Power Electronics and Drives. In today's world of competitiveness, overflow of information, rapid technological evolution, it is impossible to make it alone. Be part of the move, become member of the EPE Association. Our activities are extending: the Journal, the Tutorials, the Conference, the Courses, Books and various Publications. Don't stay behind!
